## A World History Book

MANY OF THE PRESENT DIFFICULTIES existing between nations are no doubt to some extent due to difference in language and in view-point. Mrs. Eleanor Roosevelt has expressed the opinion that differences in language form one of the greatest menaces to complete international accord, and during his years as Prime Minister of Britain, Winston Churchill expressed the same thought. There have been many proposals for the setting up of an international language, and if this could be accomplished it would no doubt prove to be of great benefit. Another proposal which has been discussed on various occasions concerns the introduction of a uniform history book to be used in every country of the world.

The latest organization to bring this matter before the public is the American National Education Association. This association, at its recent annual meeting, discussed the problem of a world history text-book, compiled by an international panel of historians. Among the advantages of such a book were those expressed by one speaker who said: "Our children will be learning the same facts about Russia that English, French and German children learn about her, and Russia would be learning the same facts about us that our European neighbors do." It was agreed that the world history book would be supplemented by the regular history courses of the country in which it was used.

### Great Need For Better Basis

It is apparent from the events which have followed the end of the Second World War, that there is great need for a better basis of understanding between nations. It is difficult to comprehend why people who fought so splendidly together for a common cause, should find themselves divided on many issues in time of peace. World leaders would do well to consider the proposals of educators and others who advocate the spreading of greater understanding through an international language and international history texts. These are only two of many plans for eliminating the barriers between nations in the hope of preventing future wars, but no factor should be overlooked in our efforts to find a basis for permanent world peace.

## OGDEN'S Fine Cut Cigarettes

### British War College

To Produce A New Type Of Army Officers

LONDON.—The War Office announced the establishment of a new British war college to double the present output of army officers, give them a rounded education in world affairs and get rid of hard-drinking, long-talking ("Colonel Blimp") officers. The new course, said Col. M. S. K. Maxwell, chief of military instruction, "will consider the typical British officer as a man who thinks his mouth is for two things—to drink alcohol and tell long tedious stories about Poona."

"...of our main objects," he added, "is to make quite certain that when the future officer leaves Sandhurst there is the minimum chance of his becoming a Major Munday or Colonel Chinstrap."

Munday, Chinstrap and Blimp were other British cartoon characters popularized by British humorists.

Before the war Sandhurst, and Woolwich, its companion officers' training school, turned out 400 officers a year. Field Marshal Viscount Montgomery, now Chief of the Imperial General Staff, wants 800.

An 18-month basic training course will stress "the human factor, man management and the psychology of the soldier."

### Scotch Kilts

Hold To Be Quite Popular For Active Service

"Battle romances" may be all right for active service, but the Canadian army wants to attract recruits, particularly to reserve units, it should revert to killed regiments, Maj. Leslie Muir (L-Winnipeg South) said in the Commons.

Major Muir, who was in the early days of the war before his kilt in the House, said it was not enough that men should be allowed to wear kilts for walking out dress.

"There's something about it that appeals to those with Scotch blood; that every one else laughs at; that every one admires; and that every one likes to stand around when the time comes to recruit," he said.

### NORTHERN AIR TRAFFIC

Development of air travel into the northland, to make available to tourists the superb mountain peaks of the Rockies, was recommended to the Saskatchewan Royal Commission by Fox by Alex Atteken, commissioner of the Regina Board of Trade. With roads into the north country poor, Mr. Atteken thought the best solution was development of air routes. "Airstrips for land planes should be built at Prince Albert National Park, he said."

Cinnabar belongs to the mineral kingdom and is the chief ore of mercury.

## Price Control And Rationing Information

Q.—Will all the coupons in ration book five be declared valid?

A.—No, all coupons in ration book five will not be declared valid. Coupons issued after Jan. 1, 1946, inclusive, will not be used. When all valid coupons in ration book five have been used, the book should be destroyed.

Q.—Is there still a price ceiling on all minor vegetables?

A.—Yes, all minor vegetables have a definite price ceiling. If you want to know your nearest Wartime Prices and Trade Board office, full details will be given.

Q.—Will you kindly tell me the number of coupons included in ration book six?

A.—In Ration book six there should be two sheets of "B" coupons for butter, two sheets of "M" coupons for meat and two sheets of "S" coupons for sugar. There are also three sets of smaller coupons, namely "X", "Y" and "V". Each sheet in the ration book is made up with 25 coupons. Check your new book, and if it is not correct, contact your local ration board.

Q.—Should my name and address be written on each page of the new ration book?

A.—There is a space left on each page on ration book six where you should fill in your name and address.

Please send your questions or your requests to the appropriate "Consumers' News" or the Blue Books in which you keep track of your ceiling prices, mentioning the name of this paper to the nearest Wartime Prices and Trade Board office in your province.

### CAMERA "GHOSTS"

An American cameraman has invented a new way of giving that shimmering effect to "ghosts" and the like. An electric heater placed behind the camera lens soaks the room air masses sorending from the heater disturb the atmosphere and thus give a tremulous appearance to everything within camera range. The effect will be similar to that seen on hot summer days when the intense heat reflected from the roads make them appear to wobble.

# Study Has Been Made In Respect To Weed Control And Their Method Of Germination

(Exchange)

**WEEDS** are a constant menace to crop production. They increase the cost of cultivation as efforts are made to control or prevent their growth and seed bed preparation and they take a serious toll on the growth and vitality of the desired crops, where they have to be removed during growing period. They give the faculty of being able to grow many times faster than the desired crops and given an even chance, they soon dominate the situation and crowd out the desired crop.

When harvested with any crop, their seeds decrease the value of whatever they are mixed with and in many cases cannot be removed except by very costly means. Some varieties of weeds have seeds which are insipidable to the taste by livestock and may even be injurious, so that feeding grains and mixtures are seriously affected.

The vitality and length of time weed seeds may lie dormant in the soil has long been a matter of wonder and mystery. Some have been reputed to have remained dormant in undisturbed soil for 60 years and then to have given a flourishing crop of their kind when the soil has been brought into cultivation. Not all of the seeds however, have the same life at the same time. It seems as if Nature is much concerned with the perpetuation of the species and regulates the rate at which germination takes place so that if one set of seeds perish without bearing seeds there are others to follow in their wake.

Quite an extensive study has been made on this question at the Soil Research Laboratory, Swift Current, Saskatchewan, and W. S. Chepil, who had charge of the work, has made a report on the results of his experiments in Scientific Agriculture. In a summary of his work and findings he says, "Studies were initiated in 1937 on the relative length of dormancy, frequency of seasonal germination, vitality, and other physiological characteristics of seeds of weeds common to Western Canada. Samples of weed seeds have been taken for several years and mixed into a 2.5 inch layer of sterilized soil in the field. The soil was periodically cultivated to the 1/2 inch depth and was then allowed to germinate and seen to spring wheat or barley in alternate years. Records of seedlings were made as they appeared,

"Analysis of the data obtained show how seeds of different species differ widely in their ability to withstand cold and that they could not be classified into categories showing common physiological characteristics. It was concluded that no method of attack, however effective on one weed, would be equally effective on another. Each weed possesses a set of its own particular characteristics. Because of this, the results of these experiments were recorded separately for each species."

"The results indicate that most seeds of weeds can withstand temperatures immediately after they are placed under favorable conditions, but that a portion of the remaining seeds lie dormant for various periods. In some species the length of period required for all seeds to germinate is only a month or two, in others many years."

"Out of a total of 58 species, six were found to have seeds whose life span in cultivated soil does not exceed one year and 18 were found to have seeds which can withstand temperatures up to 100° F. and still do not exceed three years. The majority of other seeds that possess periods of seed dormancy lasting many years constitute a serious agricultural problem and it is therefore concluded that the relative period of seed dormancy is one of the greatest single factors contributing to the seriousness of a weed."

"Clear fallow is particularly effective on weeds with relatively short period of seed dormancy but is only partially effective on weeds which have quite long periods of seed dormancy, for many seeds lying dormant during the fallow year are capable of germinating in subsequent years and in sufficient numbers to suppress the growth of crops."

"The periodic recurrence of germination does not seem to be affected by soil texture nor the amount of seasonal rainfall but is apparently determined at the outset for the great majority of the species."

"The number of seeds which germinated to the total number of seeds added to the soil was found to vary greatly with the species. The data indicate that with most species the ratio is very low, which is due in some cases to low viability of seeds and in others to high mortality of seedlings before and immediately after emergence in the field."

## WHISTLE DOES IT

With the new supersonic door opener, motorists won't have to shove or lift the garage doors—they'll just whistle it open. A supersonic whistle, operated from a switch-board, is picked up in a microphone above the door, magnified by amplifier to actuate a door-lifting motor.

Man discovered the first alloy, copper, before the time of the earliest written records, but new alloys are still being discovered.

## Tiny But Vicious

### Hummingbird Most Destructive To Members Of Its Own Species

Not the eagle or hawk, but the hummingbird is the most vicious of all the feathered folk.

This mite of a bird, weighing less than an ounce, is the most destructive to members of its own species, according to August P. Abendroth, supervisor of birds at the St. Louis Zoo.

Hummingbirds engage each other in death battles for supremacy at feeding grounds. Abendroth explained. They don't quit until one of them is killed.

They are amazing creatures noted for their speed of flight which averages 25 miles per hour. Six hundred beats a minute—10 per second—make them a haze blur in the air.

The tremendous amount of energy burned in flight makes it necessary for the birds to stop four times a day for food. They feed almost every five minutes and an hour without food finds them weakened almost to the point of death.

Abendroth pointed out that with the hummingbird feed on the nectar of certain plants. They guard their sources of nectar more closely than do other birds.

With protective features like the sharp beak and the main defense is swift maneuverability. Principal target is the heart, for one quick blow is usually fatal. They will swoop and zoom on each other for minutes until one is knocked from the air.

A pitched battle between two hummers is a sight to behold. The sharp, needle-like beak and the main defense is swift maneuverability. Principal target is the heart, for one quick blow is usually fatal. They will swoop and zoom on each other for minutes until one is knocked from the air.

Average normal life span for a hummingbird is a year and a half. In captivity not more than three are confined to one cage.

There are approximately 100 known species of hummingbirds, and their rapid rate of expiration makes the demand for them great, Abendroth said.

Zoo pays from \$20 to \$30 each for a bird, and dealers can sell all they can supply.

## Is Growing Up

### Princess Margaret Now Sixteen Will Have More Liberty

Princess Margaret, the younger daughter of Britain's King and Queen, who has passed her 16th birthday, can look forward to a gradual lowering of the childhood barriers which now surround her, a London physician spokesman said. This was told over the spokesman added, that she will attend "rounds of parties, balls, and the like." A friend of the Royal Family said Margaret Rose was "like an American girl" in many ways. She loves to dance, knows the latest fashions, wears a feathered hat, collects gadgets and finds Britain's candy rationing—12 ounces a month—a starvation diet.

## Valuable Paintings

### Owed By The King Are Being Loaned To America

Oil paintings owned by the King and Queen go to the U.S. including works by John Constable, William Hogarth and Joseph Turner, are on their way to Canada and the United States. The paintings are being lent to the Victoria and Albert Museum, the Tate and National Galleries for exhibition in Toronto, Chicago and New York.

## GROWING FAST

The main interest of a city lad who is spending a part of the summer on his grandparents' farm in Vermont is a grand-new car. He wrote his mother, "I am so excited about it and they were there to watch it grow. It's getting bigger every day," he said, and then, as if he despaired of conveying any sense of the solemn wonder of it all, he added, "Sometimes twice a day."

## SNAPPY REPLY

A connected young playwright sent two tickets for the first night of his new review to Mr. Churchill. Enclosed with the tickets was a note saying: "I am on the stage, but I am not the other for a friend—if you have one." Mr. Churchill courteously replied that he was very sorry he would be unable to be present on the first night, but would try to attend the second—if there was one.

According to an ancient Chinese legend, swallowing the eyeballs of night-dwelling animals would improve one's sight.

THE PIONEER, DIDSBURY, ALTA.

EIGHTEEN-OUNCE BABY PUTS ON WEIGHT—Being fed with an eye-dropper by Superintendent Irene Shaw at Orangeville, Ont., mouthed. A. Walker now weighs 35 ounces, 18 ounces at birth. His twin, weighing 32 ounces, died at birth.

## Viscount Montgomery

### In The Art Of Taking Pain

Feld Marshal Viscount Montgomery, Britain's chief of staff, is one of the most unusual personalities to come out of World War II.

He speaks in "I's" and knows the value of conceit. But if genius is the art of taking pains, Bernard Law Montgomery has it.

He is a man with a sharp profile and a single-minded religion—his job. He neither smokes nor drinks; once a junior general who was riding with Montgomery in his car asked, "Do you mind if I smoke?"

No, Montgomery said, and then he gave a general look out a cigarette—but not in this car."

He is a showman. During the African campaign the simplicity of his uniform, topped by a beret, was in sharp contrast to the full-dressed portrait of Rommel, his arch-

foe, which took up a cigarette—but not in this car."

He is a shaman. During the African campaign the simplicity of his uniform, topped by a beret, was in sharp contrast to the full-dressed portrait of Rommel, his arch-

foe, which took up a cigarette—but not in this car."

## DIDSBURY HAS FINE CEMETERY

While citizens of other towns in Alberta this past year have voiced their disapproval of the way in which their cemeteries have been looked after, such is not the case in Didsbury, where an active cemetery board, despite lack of proper finances, has year after year kept the local burial ground in excellent condition. Outsiders visiting the Didsbury cemetery have remarked on the lovely grounds and those responsible for this condition are to be highly congratulated.

However, rising costs have greatly increased the upkeep of our cemetery and plots were sold too cheaply in the early days when upkeep costs were not considered. The time has now come when the grounds have to be enlarged and this takes money. In order to finance the work the Cemetery Board made a special levy on all plots and billed the owners pro rata. To date 265 of the 300 plot owners have paid this special levy, which is a credit to themselves as well as to those near and dear to them who may be, or will at some future time lie in state in our lovely cemetery. But a special appeal is being made by the Cemetery Board to the 35 plot owners who have not paid their extra assessment and this Board wishes the appeal in a statement elsewhere in this issue.

We would urge all who have not paid this special levy on cemetery plots to do so at once. In this way ample funds will be on hand to carry on the good work and at the same time uphold the reputation of the Didsbury Cemetery as one of the best kept burial grounds along the line.

ANDERSON — MILLER

The home of Mr. and Mrs. W.O. Miller of Didsbury was the setting for a very pretty wedding on Monday, September 9th, when their eldest daughter Ruth May Irma, was united in marriage to Mr. Murray Anderson, youngest son of Mr. and Mrs. C.P. Anderson of Victoria, B.C., the Rev. D. Whyte Smith, pastor of Didsbury United church officiating.

The bride, given in marriage by her father, wore a floor length gown of white silk satin with lace yoke and collar and lily-pointed sleeves. Her veil was held in a clip by a swan-neck halo, cascading to the floor. The only ornament worn was the groom's gift, pearl necklace. Deep red roses made up the bride's bouquet.

Miss Thelma Miller, sister of the bride, as maid of honor and Miss Lois Miller of Hamilton, Ont., as bridesmaid, were gowned in blue and pink nylon tutus, and wore long white lace gloves. Each carried a sheaf of pink roses.

The groom was supported by Mr. Wilfred Miller, brother of the bride.

To the strains of Mendelssohn's wedding march played by Mr. R. E. Gillrie, the lovely bride entered the living room on the arm of her father, to stand under a canopy of pink and white streamers centred with a white wedding bell, where the ceremony was performed.

Following the ceremony a reception was held at the hotel to the bride being proposed by her grandfather, Mr. Ernie Knott, to which the groom responded.

Assisting with the dainty buffet luncheon were Mrs. N.W. Hunsperger and the Misses Winifred Miller, Shirley Meyer and Mary Ring.

Immediately after the reception the happy couple left for a honeymoon on Vancouver Island.

The bride's travelling costume was a suit of powder blue wool with a short coat trimmed with black fur and black accessories.

After their return they will reside in Victoria, B.C.

## :- NEWS OF THE DISTRICT :-

## NOTES FROM THE EAST

Each and every farmer together with every available man are on a threshing outfit or a combine in the east district, while many duck hunters holiday along the lake early in the mornings from Calgary and other points. But the ducks are not so good as some years they report.

George Will of Calgary spent the week end in the Jutland district and visited friends in Didsbury during his stay.

Miss Jean Coates and Dwayne Forbes went to Olds Saturday evening.

Bruce Shells had the misfortune to break down while threshing on Saturday morning but was going again on Monday.

Mr. Jack Topley was out to the farm to move cattle to their fall pasture.

Miss Evelyn Dowell has been a patient in the Didsbury hospital suffering from a broken ear drum. Fortunately Evelyn will recover, and she hopes to be back at school again in a few days.

Miss Sorgie teacher at Sunnyslope has contracted the mumps.

## MELVIN NEWS NOTES

Mr. George McNair of California, former old timer of the Didsbury district, is visiting at the home of his sister, Mrs. Art Wahl, and renewing old acquaintances.

Mr. A. C. Condit had the misfortune to have his tractor stuck in the power take-off of the binder over a week ago. We are very glad he is now home from the hospital and feeling fine. You can't keep a good man down.

Miss Irene Langdale, and her mother of Vancouver, B.C., spent a couple of days last week at the Roy McNaughton home. They were en route to Edmonton where Miss Langdale will attend university.

Claire Youngs leaves this week for Edmonton where she will resume her studies at the university. A great deal of the cutting has been done in the east district and this week sees several threshing outfits in action. We are all preparing for two or three weeks of continued good weather which will pretty well see everyone through the harvesting.

## UNREST AMONG FARMERS

(By H. G. L. Strange)

There is considerable unrest among our prairie farmers—and well there might be. Most of them are not satisfied with the present price they are receiving for their wheat. Farmers are beginning to feel that they are giving up too many subsidies to too many other people. Here are the facts:

Our farmers alone are subsidizing Britain at this moment to the tune of 50 cents a bushel on 160 million bushels a year. Is this fair? The Canadian Government is withholding between 20 and 30 cents a bushel of wheat based on the price the Government is actually receiving for the wheat they are selling—and withholding this 20 to 30 cents for five whole years. Is this right?

Our farmers are subsidizing all wheat in Canada in Canadian flour and bread, for at least 30 cents a bushel (the difference between \$1.25 and \$1.55). In addition our farmers are paying their share of the taxes required to allow millers to buy wheat for home consumption—as flour and bread at 77% cents a bushel or 49¢ a loaf.

I for one agree with our farmers that these price disparities, so discriminating against wheat growers, are neither fair, right nor just. They should, therefore, be immediately corrected. The Government can remove these discriminations overnight. Why don't they?

An elderly lady while riding a trolley car was anxious not to pass her destination. She poked the conductor with her umbrella.

"Is this the First National Bank?"

"No, ma'am," replied the conductor. "That's my stomach."

## BURNSIDE NEWS NOTES

Bob Jones tells us he made a mistake last week. He put purple gas in his truck and paid the piper too, as did two or three others. He will use his glasses next time to make sure he isn't color blind.

We understand that a few parcels of land will likely change hands in this district before spring.

Mr. and Mrs. Sam Elliott visited Sunday with Otto Blittner and his family.

Lester and his wife, old timers here, visited the district last week renewing old acquaintances. Noticing the shortage of labor they jumped in and lent a hand with the threshing for several days. Their daughter Norma, who was born here, spent the week end with them.

LAC Brian Page of Edmonton returned home on harvest leave to tend a load with the threshing.

Pete Neufeld, a well remembered old timer, dropped in on us several days ago. He is here from the Peace River country and is busy hunting up old friends. One may safely say that Pete was the best known man in the district.

Mike Nielsen and his wife, who worked on the Jack Boulton farm until his death, and Mr. McCulloch, have secured a similar place on a farm northwest of Olds.

A social and shower was held in the Seibertsville school for the new-laws, Mr. and Mrs. Allan Hughes.

Thursday night at 8:30 an oil tanker slipped (back end first) into the ditch 2½ miles west of the Burnside school. The tanker being loaded and the ditch deep, it took the united efforts of two tractors plus the truck's engine to get it out.

## SEED EXPORTS

More than 35,000,000 pounds of Canadian grown agricultural seed were exported from Canada in June 30, 1946.

Alfalfa, clover and grass seeds accounted for nearly 31½ million pounds and field root and vegetable seeds totalled more than 3½ million pounds. Among clovers the highest exports were white clover with 11,601,410 pounds, followed by red clover with 7,000,000 pounds; alfalfa with 11,410,144 pounds; and timothy with 4,017,000 pounds. Chief among the vegetable seed exports were pea seed with 2,260,637 pounds, and onions 344,320 pounds and among the field root seed mangel seed led with 241,332 pounds. Compared to 1944-45, there were large increases in the exports of clover and grass seed, with the exception of red clover, and of slender wheat grass seeds.

forms a jelly, and it is in this form

that it is added to the milk. Two heaping tablespoonsfuls of the dry meal is the allowance given to young calves. The amount is gradually increased until one-half pound is fed daily, and then the Dominion Experimental Farm in Brandon, Manitoba has evolved a horse mixed calf meal which has recently demonstrated its value.

The meal mixture is made up of

two parts of finely ground sifted oat chaff, two parts of bran, one part of dried corn and one part of dried

peas. Compacted to 1944-45, there were large increases in the exports of clover and grass seed, with the exception of red clover, and of slender wheat grass seeds.

## THE PIONEER, DIDSBURY, ALTA.

### WORLD HAPPENINGS BRIEFLY TOLD

Children in remote districts of Australia's northern territory soon will give up school lessons by radio.

Orrville Wright, who with his brother, Wilbur, was the first to fly an airplane in 1903, quietly observed his 75th birthday recently.

Frankfurt radio reported that the proceedings of the Nuremberg trials are to be published—in 20 volumes—in English, French, German and Russian.

A land drainage and pumping scheme in the potato-growing area of West Ashcombe, England, brought 33,796 acres under cultivation compared with a previous 7,124 acres.

A prefabricated bungalow was erected at Cheltenham, England, by 18 men in 29½ minutes. In one hour, 21 minutes it was ready for occupation.

Cheif Scout Lord Rowallan who is on a three-month tour of Canada is accompanied by A. W. Hull, General Secretary of the Boy Scouts' Association.

Prime Minister Fraser of New Zealand announced that the King and Queen may visit New Zealand and Australia after their three-month tour of South Africa, which starts next February.

The United Nations Relief and Rehabilitation Administration decided to establish an international children's fund for the rehabilitation of children in liberated countries.

Pain's Hill, 230-acre estate which for a time was Canadian Military Headquarters at Cobham, Surrey, England, has been placed on sale by trustees of the late owner, Charles Cobbe.

### Makes Good Gardener

#### Earthworm Is The Most Dependable Pick-and-Shovel Assistant

In this mechanical age, when "earthworm" is mentioned thoughts naturally flash to "Alexander and His Earthworm Tractor," but in spite of what that story tells us, the worm, the hoary earthworm, is the most dependable pick-and-shovel assistant that a gardener or a farmer can have on his side.

More than that, remarks the Moose Jaw Times-Herald, the garden varieties of earthworms are better than gardeners. He provides the drainage system and at the same time supplies nitrogen, potassium, phosphates and other vital minerals to the soil. His drainage system is so designed that it will catch and hold water around the roots of trees and shrubs. Some types of artesian fertilizers are deadly to earthworms. Lawns and gardens in which there is an abundance of earthworms constantly tunneling and working do not become root-bound and respond quickly to spraying.

In the United States there are earthworm farms which ship the worms to gardeners and farmers who want these little engineers to help them in their work. Tests have shown that soil in which earthworms are plentiful will drink up water 40 per cent faster than dry soil.

For grain and vegetable crops the worms are helpful producers, and tests show that, transplanted to an area, they have increased yield 41 per cent, potatoes 136 per cent, and peas 369 per cent. They speed the ripening of vegetables and help to control crop pests.

Then, too, they are an excellent assistant to the gardener or farmer on his off day, because a nice fat earthworm is an almost irresistible meal for some type of fish when dangled on a hook before them—St. Thomas Times-Journal.

### Hydro Plan

#### Indian Army Are Investigating The Possibilities Of The Scheme

NEW DELHI—For the last nine months, engineer units of the Indian Army have been making preliminary investigations on the river-controlled scheme, the Damodar Valley project which it is estimated will cost \$100,000,000. The scheme is modelled to an extent on America's publicly-owned Tennessee Valley Authority to control devastating floods, provide immense hydro-electric power and irrigate approximately 760,000 acres in the rice growing Province of Bengal.

Water supply for industrial and domestic purposes will be increased to 29 times the present supply. Hydro-electric installations will have a capacity of 200,000 kilowatts, supplemented by steam installations of 150,000 kilowatts.

### New To Them

Twenty English children, brought up under wartime conditions, have refused real French croissants made from fresh eggs—because they did not know what they were. The London Society for the salvation of children selected by the British Soldiers' Sisters and Airmen's Families Association because of their war experiences to accept the invitation of the French railway resistance movement, were on months' holiday in France.

The first mortgage, written in Pennsylvania in 436 B.C., called for payment in rations.

**NEW SECURITY COUNCIL  
CHAIRMAN**

Dr. Oscar E. Lange, a schoolboy professor who gave up his U.S. citizenship to become Polish ambassador to the U.S., is the new chairman of the United Nations' Security Council. The 42-year-old Polish diplomat, who has been a member of the security circles for his detailed presentation of the case against Franco Spain, A. Socialist, Dr. Lange was the first ambassador assigned to Washington by the post-war Polish government. Within the council he hewed to the Soviet line and has voted with Andrei A. Gromyko, Russian delegate, or abstained from voting on minor issues.

### Tourist Travel

#### Visitors To The National Parks Show Increase This Year

Visitors to Canada's National Parks where a day to record is kept numbered approximately 450,000 up to the end of July according to a statement released by the Honourable J. G. Diefenbaker, Minister of Resources. This compares with an attendance of approximately 690,000 during the whole of 1945 and is perhaps indicative of the increased tourist travel all over Canada in this first year of peace.

During the month of July alone 60,573 visitors passed through the Banff National Park and Banff National Park, Alberta, an increase of more than 18,000 over the same month last year. The other National Parks in Alberta also report similar percentage increases in the number of visitors. Vancouver Island National Park, which opened from 19,600 to 43,000; Elk Island, the home of the buffalo, from less than 16,000 to nearly 17,000; and Jasper National Park from 4,000 to 7,500 as compared with July of last year.

At Saskatchewan, Prince Albert National Park had 11,700 visitors compared with 8,000 in July, 1945, and Riding Mountain National Park in Manitoba, had nearly 55,000, an increase of more than 15,500 over the same period last year. The National Parks of British Columbia, Ontario, Prince Edward Island and Nova Scotia all tell a similar story—substantial increases over July of last year. For instance, Kootenay National Park in British Columbia, had an increase in visitors from 8,700 to 14,000; Prince George National Park from 19,600 to 30,800; Prince Edward Island National Park from 17,000 to 21,000; and Cape Breton Highlands National Park in Nova Scotia, from 5,000 to 7,000.

A feature of this year's attendance is the number of visitors bringing their own camping equipment, including many automobile trailers and making use of the campgrounds which have been equipped for that purpose in all the National Parks. Surprisingly enough, it is found that the campers have been added to a greater extent than ever before thus reducing the pressure on other park accommodation.

### Better Be Careful

#### Man In Moon Might Reset Rockets Aimed At Him

B. L. Fairweather, president of the Canadian Rocket Society, says the use of atomic energy for powerplants should make it possible for rockets to reach the moon within the next two years.

His prognosis is sound and such a shot aimed at our brother planet is equally as likely as the man in the Moon might shoot each mountain down on the earth. It is easier to let things of weight fall than it is to hurl them up, and from our viewpoint the moon is considerably above us—Kingston Whig-Standard.

### KEEPS ON GROWING

In July Treasury statistics reveal the population of the United States crossed the 141,000,000 mark. In that month births exceeded deaths and immigration exceeded emigration to give a net gain of 120,000 persons and bring the total to 141,100,000.

### ITS REAL MEANING

A lake in the town of Webster, Massachusetts only two miles square, is said to have the longest name in the world. It is Lake Chargoggagoggmanchaugagoggchaubunagungamaug. Try that with your grapefruit squeezer. In the language of the Abenaki Indians it means, "You fish on your side; we fish on ours; nobody fish in the middle."

### The Platypus

#### One Of Nature's Strangest Creatures Is Found In Australia

(By William Stewart)

MELBOURNE, Australia.—Oldest of the odd assortment of animals native to Australia is the platypus, little regarded, interesting animal with a duck's bill, cap and poison spurs on webbed feet, and a fine fur pelts and a beaver's tail.

Once called a "water-mole" and later a "duck-bill," the platypus whose real name is Ornithorhynchus was called at a house where the first stories of its existence went abroad from Australia about 150 years ago.

Last month, Dr. Karl Compton, United States scientist observing the Bikini atomic tests, met this creature from Australia recently at a meeting of Commonwealth recently at the House of Commons, one of the most important documents ever considered by the Canadian Parliament.

The speaker was Dr. W. G. Blair, Progressive Conservative member for Lanark, who supported the discussion which preceded the passing of the motion which gave House approval to the constitution. He said if the nations of the world agree to establish a World Health Organization, then there is every hope for agreement.

The world is suffering from a malignant disease which causes loss of economic, social and spiritual values. We can effect a cure only by cultivating a spirit of co-operation among all peoples. This can best be done by having a special disease committee, said the speaker.

Dr. Blair said the aim of the science of healing should be the same all over the world. Canada must take her place along with similar organizations in other nations in the promotion of health and giving adequate health services to all people.

One per cent of the annual cost of disease were given to trained researchers, much could be done to improve health in Canada and save the colossal sums spent annually on disease.

Mrs. Gladys Strum, C.C.F. member, Qu'Appelle, supported the motion and said Canada should not only pledge itself to international health, but should not rest until every Canadian family has healthy, sanitary home surroundings.

She said that "so long as we in Canada have slums, overcrowding, obsolescent and unsanitary buildings, ignorance and poverty, we shall sustain these losses from disease, preventable losses which we can avoid by attacking the living conditions of the people."

Mrs. Gladys Strum, C.C.F. member, Qu'Appelle, supported the motion and said Canada should not only pledge itself to international health, but should not rest until every Canadian family has healthy, sanitary home surroundings.

She said that "so long as we in Canada have slums, overcrowding, obsolescent and unsanitary buildings, ignorance and poverty, we shall sustain these losses from disease, preventable losses which we can avoid by attacking the living conditions of the people."

Mr. Gordon Graydon, Progressive Conservative member for Toronto Broadway, said that while he supports the principle of the policy, he believes that Canada should stop giving lip loyalty to "all these things which will necessitate our voting large sums of money to be used by these bodies."

As for the New York meeting which drafted the constitution of the organization, he said the Canadian provinces should have been represented. It would be the provincial health officers who would have to carry out the terms of the test of the constitution.

Mr. Gordon Graydon, Progressive Conservative member for Peel, said he found himself largely in agreement with the point of view of U.S. Senator Warren Austin, who said we should have a long way to go to find a formula by which they can get along, but that health is one of the universal things which may well be used as a testing ground. Health provided all with a common interest.

The World Health Organization recessed an effort to see that health conditions at home and in other nations were cleaned up in the interests of all.

Mr. J. H. Backmore, Social Credit House Leader, said his group has no particular objection to joining the organization but, in view of the importance of national affairs, we follow either directly or indirectly to be influenced by bodies of people outside our country, the more difficult our situation is going to become."

He said it was obvious that man had been created by everyone who participated in the decision that the standard of most of our ill health is a poor standard of living in Canada."

Although joining this international organization for health will enable us to improve our standard of living in Canada, no one has taken pains to explain," he said.

### Bolivian Potatoes

#### Strange Looking And Of Many Different Colors

If you should travel to Bolivia you would be interested in the strange looking food that would be served to you. Some would not be much larger than chestnuts, and many would be of different colors—jet black, pink or lavender. White potatoes they call chuno, but they are always from the tubers that are placed in the sun to dry.

Man probably eats chuno, Christmas cards sent on its behalf, and Christmas cards sent on its behalf, and the Bolivians the secret of hibernation in two or three day spells during the cold season.

### WORLD HEALTH ORGANIZATION

NEW TURKISH PREMIER—New premier of Turkey, Recep Peker, counts on British and U.S. support against Russia, which country is seeking to gain special privileges in the Dardanelles, which Turkey has kept open, in peace-time, to world shipping.

### WHILE YOU WAIT

Do you want your coffee roasted by electronic heating while you wait?

A. Colman invented A. S. Tortoise, just now a son of tortoise, into which the green coffee beans are dumped, and roasted by means of coils and infra-red lamps. The electric eye looks at it all the while, and when the beans have changed from green to just the right color brown it will shut off the heat. Then the beans will cool off, fresh, ready to go—Scientific American.

There have been white blackbirds, white redbirds and white bluebirds.

### Trained By Germans

#### British Troops In Occupied Zone Have Best Athletic Coaches

Strange outcome of the war in this topsy-turvy age of atomic energy may be the winning of Olympic medals by British athletes trained in Berlin by German coaches and physical culture experts.

Within the magnificence of Berlin's Olympic Stadium, British Occupation troops are running, jumping and hurling weights daily in an effort to keep fit and cheat monotony.

They have not only the finest track in Europe, but the best coaches and doctors of physical culture have been employed. And whatever your opinion of Germans it is a fact that where can be found more efficient and more skillful athletic coaches—London Express.

### The Best Course

#### Why Utah Salt Flats Chosen For Auto Speed Tests

The world's automobile speed record was held by John R. Cobb of London who, driving his Railton Red Devil, set a speed of 207.9 miles per hour on the salt flats near Bonneville, Utah, on Aug. 23, 1939. This course is considered more satisfactory than any other because it is smoother and its cold salt reduces the temperature in the friction tires, removes dust and lessens the danger of blowouts. But best of all is its 1,300-foot altitude which, owing to the decreased atmospheric pressure, enabled Cobb to reach a speed that at sea level would have been only 314 miles per hour—Collier's.

**OUR COMPLETE SHORT STORY**

## SHORT MAN

By RAE RESNICK

Copyright  
Wheeler Newspaper Syndicate

JACK KERRIGAN walked into the large, bare room and nodded to his assistant, Frank. A group of men and boys were gathered in a corner staring at the thick mats on the floor; others waiting eagerly, impatiently, for his assistant to start things going.

Those men would engulf in the course described by Frank's opening speech and their first lesson.

Frank always took care of the end very well. He started the session with the same old spiel; one that would encourage every one of them to take the course no matter what his reason was for coming. "What do you know of this?" he asked, and followed Frank's speech to fit them.

"The reason you're all here," Frank was saying, "is to learn the art of self defense, to learn jiu jitsu."

Frank's voice boomed out, but Jack was not listening to the routine speech. He was thinking rain and remembering last night.

Even in the rain, Jack liked walking with Millie. He liked the way she tucked her arm snugly in his, the way her curls bobbed up and down with each energetic step she took. But last night, he liked walking with her because she wasn't any taller than he was.

Occasionally, she turned her head to smile at him. She wasn't sure at him any more, he thought. That was swell. A week ago, she had looked as though she had been born yesterday. Now she was cringing. It looks as though we'll never get one."

Her shoulders were hunched as though to ward off the rain. "As soon as we pass a telephone I'll try to get one," he told her.

Frank's voice cut back into his commanding. "What have you mastered, Jack?" Frank continued.

"You will be able to protect yourself in any fight, whereas formerly the odds have been too much against you to give you a chance."

Jack's thoughts went back to Millie and himself. They had come to a telephone.

He looked up and down the deserted street and said, "I'll walk outside while you phone." But there wouldn't be time for fifteen minutes. He was tall. He decided not to call again. Millie was alone.

Going outside, he saw a bedraggled mocha standing near her, collar turned up, watching eagerly as Millie rummaged in her purse for some change.

"Get out!" he ordered the mocha authoritatively.

Barely turning his attention from Millie's searching hands, the derelict said, "In a minute."

That rankled Jack. Even the legs of a gaunt old man, he thought, had no respect for a short man. It always hurt him to have Millie see the lack of respect people had for

him. But he never missed an opportunity to show he could hold his own. Jack grabbed the man's arm, and, with one swift movement, tossed him over his shoulder.

Millie pushed over to the man who was sprawled out on the wet pavement. "You didn't have to do that!" she almost screamed at Jack. "You'd hurt a poor, helpless man just to show off. Last week it was that man at the dance, and he didn't even do anything."

"I tried to get fresh with you." "He did not. He only asked me to dance."

He took a deep breath. "Just because he was a big guy, he thought he could cut in on my girl."

"Maybe I was your girl, but I'm not now. Not anymore. You're smaller than most men, all right—smaller inside." With anger, she walked away.

Frank was waiting up. "There is another reason why you and your wife want to take this course—it is to win back the admiration and love of women because of your ability to protect them. And here is the man who will help you toward that achievement, gentleman, the best in jiu jitsu expert in the country, Jack Kerrigan."

The room was quiet after the speech.

Frank always took care of the end very well. He started the session with the same old spiel; one that would encourage every one of them to take the course no matter what his reason was for coming. "What do you know of this?" he asked, and followed Frank's speech to fit them.

## WIRED FOR SOUND

Many Loudspeakers Create Constant Din At Luxembourg Palace

Luxembourg Palace is known to people throughout the world as the site of the world's best organized, peacock-like variety is wired for sound.

Throughout the luxurious building constructed for Queen Marie de Medici a widespread, almost painstaking distribution of loudspeakers ensures an almost constant din.

In the United States, however, Britain or the United States indulges in an iron-clad speech, the result of which will hunt him long after he has finished speaking.

He will hear his words in the Assembly, in the corridors, writing rooms, bars and even in the first and department, if he happens to go there during his vacation.

None but the inexperienced open a window in search of respite. In the courtyard and in adjacent streets another battery of loudspeakers shrill forth, summoning vehicles for delivery, travelling to and from the building.

Some delegates, perhaps constraining the universal clamor as a challenge, provide their own exemption in the form of motorcycle escorts.

Peace is wonderful.

## Denmark's Only Colony

Greenland, The Second Biggest Island In The World

The second biggest island in the world, most of Greenland lies within the Arctic Circle north of Canada. It is the only Danish colonial possession. Of its 1,761,518 square miles, 705,234 square miles consist of a gigantic ice-cap and only 31,284 is ice-free land. Population about 16,630, of whom about 16,000 are Danes and the rest Eskimos. The town of Greenland is a Government town.

The Eskimos are a merry, friendly people. In the winter they live in igloos, which are huts built partly underground of stones and turf and roofed with turf, and in the summer in light, portable structures. The Eskimos are expert sealers and in the world in their kayak, a kind of very light canoe made of seal-skin stretched over wood or whalebone. The women row much larger boats called umiaks, which also make of skin can carry up to twelve persons. The men's parkas, clothes are made of skins, and men, women, and children wear trousers.

Greenland was discovered and colonized by Norwegians from Iceland in the tenth century.

The Iron Duke is not the only veteran of Jutland to go to the shipyards this year. Lord March, who was officially announced that the Warspite of the Queen Elizabeth class was ticketed for destruction. The Warspite was terribly mauled at Jutland, but was reconstructed and was still doing her part in the Second World War. She was the second most heavily heavily previous to the landing and joined the eastern fleet in the war against the Japanese.

But the future of even modern battleships is in doubt. The atomic bomb has changed the picture of naval warfare and has changed the nature of warfare. The Bikini experiment showed that what a single A-bomb can do. The fact is that atomic energy involves such terrific forces that the nations of the world can no longer rely upon armories or navies, but must rely on peace instead.

Wheat Production For Greater Comfort

Production In Europe Not Sufficient Illinois Central Railroad Plans Share Up-To-Date Service

Railroad car doors will open at the top, and the interior will be designed scientifically . . . and the old-fashioned upper or lower berth will give way to the roomette.

This was the prospect drawn for the Illinois Club in Chicago as G. G. Johnson, assistant passenger traffic manager of the Illinois Central Railroad, discussed the future of railroading at a luncheon meeting.

Preliminary production estimates have been received from 12 countries which showed about 60 per cent of Europe's wheat before the war. They indicated production this year will be about \$20,000,000 bushels.

This would be about 30 per cent, larger than last year's output of 64,000,000 bushels, far below what was available in 1914, 115,567,000 bushels. Most of the improvement is due to western Europe and the Mediterranean area.

## SMILE AWHLIE

For many years

you have been carrying some bricks."

Murphy—"I ain't feelin' well, guv'nor. I'm tremblin' all over."

Freeman—"Well, then, get buckin' the sieve."

The wedding has now been postponed indefinitely.

At five a.m. a four-year-old boy awoke and asked his mother to tell him a story.

"Quiet," said mother. "Daddy will be home in half an hour and tell us both one."

Two friends were discussing a new neighbour.

"I believe this man is a great gimp," remarked Murphy.

"No," replied the other, "she has a keen sense of humor."

Hurst—"Talking about Africa makes me think of the time—when the gypsies roamed around. Then bachelors, headache, rheumatic pain, disturbed rest or that 'fired out' feeling may soon follow. To help keep your kidneys working, take a good kidney tea."

A city man crawled over to a passerby to find himself in a position with a vicious-looking hilt.

"Hey, there," he called to a farmer. "Is this hall safe?"

"Sure," said the farmer. "Aren't you glad you found me?"

"I'm glad," said the man.

"Janitor, you could cool our apartment nicely if you would run ice water through the radiators."

"Can't be done, madam."

"What did you have in them last winter?"

"Junior—do you say? It is me or is it I?"

Father—"Always remember the rhyme: 'I am I, I am the spider to the fly.'"

"I am I, I am the spider to the fly?"

"I am I, I am the spider to the fly?"

"I am I, I am the spider to the fly?"

"I am I, I am the spider to the fly?"

"I am I, I am the spider to the fly?"
